MEND
PeerStory: Mend

Leader PeerSpot

This PeerStory is a collection of quotes from a real user sharing their experience using Mend on PeerSpot.

Kieran Whelan

Principal Security
Engineer at Texthelp Ltd.

★★★★☆

Use Case

Mend is a SaaS solution we use to make open source libraries for our products. It covers license usage, license type, and CVE vulnerabilities.

Valuable Features

Mend's integration with developer workflows is a massive part of our work. We use Visual Studio, and it integrates flawlessly with that. There is also a Chrome extension called Mend Advise that **lets our team check libraries for vulnerabilities** before they download and use them.

> **"Our security posture is excellent because we can address the vulnerabilities Mend reports."**

When we have a release or run the script, it automatically picks up the vulnerabilities.

Results

It reduced the vulnerabilities in production by about 80 percent.

> **"The primary benefit is that we no longer download vulnerable libraries."**

ROI

We can see a return on investments because we have no security breaches, security costs, or GDPR issues... **The return on investment is having a secure product.**
